Project Background & Business need/opportunity

In an era of quiet developed video and audio media

Some people may feel exhuasted for movie selection

Can bring profits to the movie copyright owner

Reason

We want to save the selecting time for users, they can just enjoy their movie directly.

Our user can share good movie with each other by our cloud server, they even can make friends through our server.

There are many music app can recommend everyday music to their users, we also wish add this function to our server.

Impact

Build a bridge between many movie sources

This also adds the use of our system to the lifestyle before watching movies

Ideally, this will become a new reality or a new habit.

Who

- Person who love watching movie
- Our user's opinion is very important for us, we will listen to their opimions carefully.
- Our audience will be across the globe, they can share good movie of their own country to aother user.

What

Constraints

- Cloud server
- AI
- database.
- java

Thank you!
